

The GIRAFFE is sculpture like combined wind turbine tower and PV module rack, designed and made by Innoventum Ab in Malmö.

The Giraff outside Malmö Arena has a "back blanket" of 16 pc of 245 Wp solar panels and a 2 kW wind turbine as head.

REPS Oy Ab designed, delivered and participated in the installation of the battery bank and the off-grid electronics, which has an OutBack inverter charger and two OutBack Flexmax 60 as a heart.

The "bench" under the Giraffe offers public AC outlets for charging e-bikes, phones, laptops and other mobile devices and also provides a free 4g-Wifi internet connection.
